

AAROH — Sample Learning Material

Science — Class 4

Topic: Water and Its Importance

Learning Objectives

- Understand why water is important for living things.
- Identify common sources of water.
- Explain the basic idea of evaporation and condensation.
- Learn simple ways to save water.

1. Why Do We Need Water?

Water is necessary for all living things. People need water for drinking, cooking, cleaning and growing food. Plants need water to grow, and animals also need water to survive. Without enough clean water, living things can become sick or may not survive.

2. Sources of Water

Water comes from many natural sources. Rain is an important source of fresh water. Rivers, lakes, ponds and wells can also provide water. Some places use groundwater through tube wells and hand pumps.

Water Source	Example
Rain	Rainwater collected from the sky
River	Flowing surface water
Lake	Large body of mostly still water
Pond	Smaller body of still water
Well	Groundwater collected from below the surface

3. The Water Cycle

The Sun heats water on the Earth's surface. Some of the water changes into water vapour and rises into the air. This process is called evaporation. When water vapour cools, it changes into tiny water droplets. This is called condensation. The droplets can form clouds. Water later falls back to Earth as rain. This continuous movement of water is called the water cycle.

4. Saving Water

Clean water should not be wasted. We can save water by turning off taps when they are not needed, fixing leaking taps, using only the water we need, and reusing suitable water for plants or cleaning. Small actions by many people can help protect water resources.

Key Words

Water: A liquid needed by living things. **Evaporation:** Change of water into water vapour. **Condensation:** Change of water vapour into tiny water droplets. **Water cycle:** Continuous movement of water between Earth and the atmosphere.

Teacher Test Questions

1. Name three sources of water.
2. Why do plants need water?
3. What is evaporation?
4. What happens during condensation?
5. Write two ways to save water.

Testing purpose: Upload this PDF to AAROH and test OCR/content extraction, concept extraction, English → Santali/Hindi translation, simplification, quiz generation, assignment generation, flashcard generation and RAG.
